International Journal of CLIMATOLOGY

A Journal of the Royal Meteorological Society

AIMS AND SCOPE

Papers dealing with climatological problems are widely dispersed in the literature of meteorology, hydrology, geography and ecology. The *International Journal of Climatology* aims to span the whole expanding field of climatology through the publication of research papers, major reviews of progress and reviews of new books and reports. Its main role is to report and stimulate research in climatology, and the Journal encompasses global and regional studies of climate, local and micro-climatological investigations, long-range forecasting, changes of climate (past, present and future), and the application of climatological knowledge to a wide range of human activities.
